

PROFESSIONAL SUMMARY

Seasoned Enterprise Application Integration Specialist with 20+ years of success delivering complex integration, middleware, and payment systems for global enterprises. Recognized for leading large-scale migration projects – including ISO 20022 adoption – and optimizing mission-critical financial platforms. Currently expanding expertise into Cloud Migration, AI Automation (Agentic AI), and Python scripting, leveraging Microsoft Azure certifications and hands-on Python development to deliver scalable, next-generation business solutions.

- Extensive working knowledge in the areas of Business Integration using, **IBM App Connect Enterprise**, **IBM Integration Bus 10.x/9.x (IIB)**, WebSphere Business Integration **Message Broker 8.x/7.x/6.x (WBIMB)**, IBM WebSphere **DataPower** Integration Appliance XI50/52, XB60, WebSphere **MQ 7.x/6.x (WMQ)**, **APIC**, Service Oriented Architecture (**SOA**), Enterprise Service Bus (**ESB**), Enterprise Application Integration (**EAI**) platforms
- Cloud & AI Transition: **Microsoft Azure** Fundamentals certified; currently pursuing Claude Certified Architect — Foundations (CCA-F).
- Successfully built AI-powered side projects: Full-stack finance tracker, AI Job Matcher & Resume builder, Content curator, AI Digital Marketing Agency and IDEA App.
- Experience in **MicroServices** and knowledge of Containerization with Docker
- Experience in **IBM Financial Transformation Manager (FTM2.x & 3.x)** in Financial Domain with exposure to various message formats
- Experience in writing **DFDLs**, good understating how parsing is done with DFDL
- Experience in **JAVA/J2EE** and **XML** based application development on Apache, **BEA Web logic** and WebSphere application servers
- Experience in designing and developing **EAI/B2Bi** solutions using WBI technologies with strong understanding of integration architecture and coding patterns
- Having very good experience and knowledge on different integration patterns like **Publish/Subscribe**, Request/Reply, Point to Point, Hub and Spoke, Synchronous/Asynchronous etc
- Exposed to deploying solutions in **High Availability, Load Balancing Configurations** eliminating single points of failure
- Expertise in developing middleware modules and converting the business rules into message interfaces
- Experience in applying security polices certificates, encryption and **SAML** in various Datapower devices
- Proficient in developing message transformations using **XSL (XSLT)** including custom XSLs for various policies in Datapower including routing, protocol mediation and message enrichment
- Experience with application development using **SQL Alchemy, PostgreSQL, MySQL, DB2 and Oracle** databases
- Expertise in writing **PYTHON, ESQl** and **Java Compute Node** procedures and functions, knowledge of ERP system integration, TPI connector and WTX node
- Hands on expertise in configuring & creating components of Datapower appliance such as B2B Partner Profile, B2B Gateway Service, Web Service Proxy, Multi-Protocol Gateway, XML and Web Firewall
- Knowledge of monitoring strategies, performance tuning and ability to apply technical knowledge to effectively troubleshoot, problem diagnostics and investigations also **provided L2 and L3 production support**
- Good experience in developing common reusable components utilizing **ESB and SOA** technologies
- Proficient in build and deployment of Message Broker and Integration Bus components in more than one environments manually and also using scripts (auto deployment) using **CI/CD, Jenkins, Gradle, GitHub**

- Experienced in DevOps, understanding the melding of operations and development to quickly deliver code to customers
- Experienced in **Web Services**, **WS-Security**, **WSDL** and service governance using **WSRR**, and in application adapters like SAP R/3, **Siebel**, technology adapters like **JText**, **JDBC/ODBC** and Email
- Experience with UNIX flavors and environments and shell scripting
- Strong oral and written communications skills and demonstrated ability to interact with business users and understand and manage requirements and process

PRIMARY SKILLS

Middleware	ACE 12.x/11.x, IIB 10.x, IIB 9.x, WBI MB 8.x/7.x/6.x, WMQ V7.x/6.x, IBM APIC 5.0.7.2, WebSphere Process Server, IBM DataPower XI52/50 XB60/62, WebSphere Data Interchange (WDI), WMBFE, WSRR V8.0.0.2, FTM 3.0/2.1
Languages	Java 21, Python 3.x, TypeScript, ESQL, DFDL, Scala, Groovy, Clojure, Spring Boot 3.2 (Java), React (TypeScript)
AI / ML	scikit-learn (collaborative filtering), NLTK, VADER (sentiment analysis), Anthropic Claude API (vision + chat), ML-powered categorisation, Prompt engineering
Backend Frameworks	Spring Boot, Spring Security, Spring Data JPA, JJWT 0.12 (JWT auth), Flask (Python microservice), MapStruct, Lombok, Rome (RSS/Atom parsing), Flask-Mail
Frontend	React 18, TypeScript, React Router, Axios, Recharts, Tailwind CSS, JavaScript, HTML, CSS
Cloud & Infrastructure	AWS SQS, AWS Lambda, AWS S3, AWS Fargate, AWS SDK v2, LocalStack, OpenShift, Docker, Docker Compose
Database	PostgreSQL 16, DB2, Informix, Oracle, Teradata, MySQL, MS SQL Server, MongoDB Atlas, SQLAlchemy, Flyway (migrations), SQL Developer
Architecture & Design	Domain-Driven Design (DDD), Hexagonal (Ports & Adapters) Architecture, Event-Driven Architecture (EDA), RESTful API Design, Microservices, Multi-module Maven projects, UML, Microsoft Visio
Security	JWT (stateless auth), BCrypt password hashing, Spring Security filter chains, CORS configuration, Role-based access control (RBAC)
Markup & Data Formats	JSON, XML, XSLT, XPath, HTML, RSS/Atom, CSV
J2EE Technologies	JNDI, JMS, JDBC, Servlet, JSP, JAXP (SAX/DOM), Web Services, JAXB, JavaScript
Distributed Technologies	EJB, RMI
Web / App Servers	Apache Tomcat, WAS 8.5/6.1, J2EE Application Server, Weblogic Server
Source Control	GitHub, CVS, ClearCase, POWER, Tortoise SVN
IDEs & Tools	PyCharm, IntelliJ IDEA, VS Code, RAD 8.5, RSA 8.0, Eclipse, JDeveloper, Postman, SoapUI, Beyond Compare, Ant, Node.js
Testing	JUnit, JUnit 5, Spring Boot Test, HP QC, Quality Center, Splunk
Operating Systems	Windows 98/2000/XP, UNIX, Linux, Ubuntu, AIX 6.1
Other Tools	Remedy, Serena, IBM Data Studio, F5 Load Balancer, XML Schema, Excel (AI-powered agent), Chrome (AI-powered agent)

SECONDARY SKILLS

Programming Languages	Basic Perl, Shell Scripting, Bash Scripting
Middleware	IBM App Connect, IBM API Connect, IBM WBI Adapters (JDBC, mySAP, SAP PI), IBM ODM

CERTIFICATES AND AWARDS

Microsoft Azure Cloud Certified in 2024

IBM Certified Solution Developer-WebSphere Message Broker 6.1

BrainBench Certifications in Java 2, Java 2 Enterprise Edition J2EE 1.4, Web Development Concepts and RDBMS Concepts

Thanks a Zillion Award for performance in Payment Settlement and Content Module in MTEP Project in Wipro Technologies, India

Cambridge ESOL's Business Language Testing Service (BULATS) certificate in Oct 2008

Internal Certification on WebServices Concepts from Wipro Technologies, India

Certificate of Excellence while working with Bharat Glass and Crockerries, India

Certification in Developing Enterprise Applications & Web Services Using J2EE Technologies by NIIT, India

Merit Recognition Certificate in National IT Aptitude Test by NIIT, India

QUALIFICATION

Bachelor of Engineering in Computer Science and Engineering from Bapuji Institute of Engineering Technology, Davangere affiliated to Visvesvaraya Technological University

PERSONAL EXPERIENCE

Project: AI Powered Personal Finance Tracker Live: <https://finance-tracker-frontend-afy8.onrender.com/>
GitHub: <https://github.com/sksharmar1/finance-tracker>

Project Description:

AI-powered personal finance tracker with expense categorization, receipt scanning, household expense sharing, and automated tax report generation — built as a full-stack side project.

- Built a full-stack finance tracking application with a React/TypeScript frontend and Flask/Python REST API backed by PostgreSQL
- Integrated Anthropic Claude API for natural language expense parsing, receipt photo scanning via Vision, AI-generated monthly financial reports, and a finance chatbot
- Implemented a hybrid ML pipeline (scikit-learn Naive Bayes + keyword boost) for real-time expense categorization with user feedback retraining
- Designed multi-user Household Mode with invite-code-based membership, shared expense views, and spending split calculations
- Built an annual tax export feature generating structured PDF reports (ReportLab) with an AI-written executive summary for accountant use

Technology Stack: React, TypeScript, Flask, Python, PostgreSQL, scikit-learn, Anthropic Claude API, JWT Auth, ReportLab, Tailwind CSS, Axios, SQLAlchemy (ORM), Flask-JWT-Extended, python-dotenv, flask-cors, Git

Project: AI Job Matcher & Resume Builder

Live: <https://resumeai-web.onrender.com>

GitHub: <https://github.com/sksharmar1/resumeai>

Project Description:

Built ResumeAI, a production-grade AI-powered career platform that parses resumes and job descriptions using Claude Sonnet, computes semantic match scores via 1536-dimensional vector embeddings stored in pgvector, and generates tailored resume suggestions with actionable gap analysis. Implemented per-role resume tailoring using individual Claude API calls with before/after diff tracking, PDF export with three professional templates, AI cover letter generation, and a job URL importer supporting LinkedIn, Indeed, and company career pages. Deployed end-to-end on Railway (FastAPI + Celery + PostgreSQL + Redis) and Vercel with JWT authentication and GitHub CI/CD.

- Architected full-stack AI career platform using FastAPI, React/TypeScript, PostgreSQL + pgvector, and Celery for async background processing
- Integrated Anthropic Claude Sonnet API for resume parsing, per-role bullet tailoring, gap analysis, cover letter generation, and an AI career advisor chatbot
- Built a semantic matching engine combining pgvector cosine similarity, ATS keyword scoring, and required skills coverage into a weighted composite match score
- Designed a two-pass Claude extraction pipeline to parse 11+ experience entries from 29,000+ character resumes with dedicated structured and experience-focused passes
- Implemented PDF export system using ReportLab with 3 resume templates (Classic, Modern, Executive) and 3 cover letter templates
- Deployed to Railway (4 services: API, Celery worker, PostgreSQL, Redis) and Vercel with Docker containers, GitHub Webhooks, and automated schema migrations via Alembic

Technology Stack: Python 3.12, FastAPI, SQLAlchemy 2.0 (async), PostgreSQL 16 + pgvector, Redis, Celery, Anthropic Claude API (Sonnet 4 / Haiku 4.5), PyMuPDF, ReportLab, React 19, TypeScript, TanStack Query, Docker, Railway, Vercel, JWT, Alembic, httpx, GitHub

Project: AI Content Curator for Self-Learners

Live: <https://cc-frontend-bwlg.onrender.com>

GitHub: <https://github.com/sksharmar1/content-curator>

Project Description:

March 2026 – Present

A full-stack, AI-powered content curation platform designed for self-directed learners tracking topics, certifications, and professional development goals. The platform ingests articles and videos from RSS feeds, applies a machine learning recommendation engine to surface personalized content based on reading history, and uses NLP sentiment analysis to surface insight from user notes (e.g. “This resource felt 90% useful—why?”). Built to production-grade standards, the project demonstrates enterprise software engineering patterns including Domain-Driven Design, Event-Driven Architecture, and hexagonal (ports-and-adapters) structure across a polyglot micro services stack.

- Architected with **Domain-Driven Design** (bounded contexts: User Profile, Content Ingestion, Recommendation, Analytics) and **hexagonal (ports-and-adapters)** structure, keeping domain logic fully decoupled from infrastructure across all services
- **Event-Driven Architecture** via AWS SQS — content-ingested, user-activity, and digest-scheduled queues drive async, decoupled workflows across a multi-module Maven Monorepo with a shared-kernel

- **Spring Boot 3.2 / Java 21** micro-services handling JWT-secured user profiles (interest graph with weighted topics), RSS/Atom feed ingestion (Rome library, SHA-256 deduplication, 30-min scheduled polling), and stateless Spring Security auth (BCrypt + custom filter chain)
- **Python ML micro-service** (Flask + scikit-learn) providing collaborative filtering recommendations and NLTK/VADER sentiment analysis on user notes — containerized on AWS Fargate
- **AWS cloud surface:** SQS event backbone, Lambda for weekly personalized email digests, S3 for article storage and ML model versioning, Fargate for server less ML hosting; LocalStack for zero-cost local emulation
- **React + TypeScript** SPA with infinite-scroll personalized feed and progress dashboard; deployed via **OpenShift** container orchestration with Docker Compose locally and Flyway schema migrations across environments

Technology Stack: Java 21 (Spring Boot services), Python 3.11 (ML micro-service), TypeScript (React frontend), SQL (PostgreSQL), Spring Boot 3.2, Spring Security, Spring Data JPA, JWT 0.12, Rome (RSS), MapStruct, Lombok, Flask, scikit-learn, NLTK / VADER, React 18, Axios, AWS SQS, AWS Lambda, AWS S3, AWS Fargate, AWS SDK v2, LocalStack, OpenShift, Docker, PostgreSQL 16, MongoDB Atlas (content store, upcoming), Flyway (migrations), Maven multi-module, Domain-Driven Design, Hexagonal Architecture, Event-Driven Architecture, GitHub, PyCharm, JUnit 5

Project: Cloud Security Dashboard

<https://github.com/sksharma1/cloud-security-dashboard>

<https://cloud-security-dashboard-frontend.vercel.app>

Project Description:

May 2026 – Present

Built a production-grade multi-tenant security posture platform with Spring Boot 3.2 backend, React 18 frontend, PostgreSQL database, and Redis caching deployed on Railway + Vercel. Architected real-time findings visualization, compliance scoring engine, and multi-cloud provider scanning with zero-downtime deployment and auto-scaling infrastructure.

- Architected multi-tenant SaaS platform for cloud security posture management using Spring Boot 3.2, PostgreSQL, and Redis on Railway + React 18 TypeScript frontend on Vercel; designed for 5K+ findings/day with <200ms latency and zero-downtime deployments
- Engineered automated security scanning pipeline that aggregates findings across AWS/Azure/GCP, implements compliance scoring (CIS/PCI/HIPAA/NIST), and provides real-time dashboard visualization with responsive charts (Recharts), compliance gauges, and multi-severity finding categorization
- Implemented full-stack integration with REST APIs, CORS configuration, JWT authentication scaffolding, encrypted multi-tenant credential storage, and Zustand state management; designed application architecture following Spring Boot best practices (dependency injection, layered services, JPA repositories) and React composition patterns

Technology Stack: Spring Boot 3.2, Java 21, Spring Data JPA, Spring Security, Maven, PostgreSQL 15, Hibernate ORM, Liquibase (migrations), Redis 7, Spring Data Redis, Jedis client, React 18, TypeScript, Vite, Tailwind CSS 4.x, Zustand, Recharts, Axios, Railway (Backend hosting), Vercel (Frontend hosting), GitHub (Source control), Docker, RESTful architecture, CORS, JWT (auth-ready), OpenAPI/Swagger (documentation-ready)

Project: Digital AI Company

www.aetherforgedigital.com

AetherForge AI Digital Marketing Agency

Founder & CEO

April 2026 – Present

Founded and fully built a 100% AI-powered digital marketing agency staffed by 45 specialized AI agents acting as CEO, Creative Director, SEO/PPC Specialists, Account Managers, and Client Success roles.

Designed complete organizational structure, defined agent roles, KPIs, and internal workflows to enable 24/7 autonomous operation with zero human overhead.

Developed and launched the official agency website (getaetherforge.com) from scratch using HTML/CSS/JS, integrated Formspree for lead capture, Google Analytics 4 for tracking, and custom success flows with interactive elements.

Successfully configured custom domain (getaetherforge.com), Netlify hosting, DNS management, and Google Workspace verification for professional email setup.

Created end-to-end service packages (Essential, Growth, Premium) with competitive AI-driven pricing positioned 40–60% below traditional agencies while maintaining high-quality deliverables.

Built functional lead generation system including contact forms, automated success messaging, and conversion-optimized UX/UI.

- Transformed a conceptual AI agency idea into a fully operational, live digital business in under one week.
- Demonstrated expertise in AI orchestration, full-stack web development, digital marketing strategy, DNS/domain management, and modern web technologies.
- Created a scalable, autonomous business model leveraging specialized AI agents for creative, technical, and client-facing functions.

Technology Stack: Frontend & Web Development, Netlify, Google Analytics 4, Google Workspace, Formspree, Multi-Agent AI Systems, Responsive Design, DNS Management, JavaScript (ES6+), CSS3 (Variables & Animations)

AgentVenture — Agentic Business Builder

May 2026 — Present

AI-powered solopreneur platform that conducts multi-agent market gap research, generates structured business plans, and orchestrates specialized AI agents for go-to-market execution — from competitive analysis through launch deliverable generation.

- Designed a multi-agent orchestration architecture using the Anthropic Claude API, deploying six specialized role agents (market research, copywriting, SEO, social, outreach, analytics) that execute autonomously in parallel and stream real-time output to a live activity console
- Built an interactive 5-phase business builder — gap analysis, planning, entity registration, agent deployment, and launch command center — with a Claude-powered AI strategy advisor providing context-aware GTM guidance throughout the workflow
- Validated a \$6.8B TAM market opportunity in solopreneur operations through competitive analysis of 12+ tools (Taskade, HoneyBook, Dubsado, Notion), identifying an unclaimed positioning at the intersection of agentic task orchestration, client delivery, and invoicing

Tech Stack: React, TypeScript, FastAPI (Python), Anthropic Claude API (claude-sonnet-4-6), Multi-agent orchestration, PostgreSQL, Railway, Vercel, Stripe, Clerk

PROFESSIONAL EXPERIENCE

WELLS FARGO BANK, N A, Charlotte, NC

Nov 2019 – Present

Titles Held: Lead Software Engineer/Vice President, Senior Software Engineer, Apps System Engineer

Project/s: Global MTS Program, MTS, Resiliency, Shared Risk Platform, ISO 20022 Migration, EAI Agent

Responsibilities:

- Provided L3 level of production support for a critical financial middleware product
- Handled multiple migration projects including ISO 20022, with complex RFMLs
- Hands on with building interfaces with CHIPS, ACH, Global Sanctions, Fedwire, PYCS, Postings(J7), PYPP, Collections Scanning, Tested Fax, IntelliTracs, IntelliTran, CyberPay, CyberInquiry, Intraday Liquidity Monitoring System, Transaction Status Interface
- As a member of Global Payment Broker team I am involved in various integration projects involving, new development, maintenance of current environment, new SHRP and Resiliency projects
- Used ESQL, DFDL extensively to parse different message formats like SEPA, JSON, NACHA, OFAC, IFML, ISF, GUS and various others
- Provide support for existing Electronic Payment Broker MTS Module logical testing, fixing defect and enhancements
- Effectively used Web Services Distributed Management Event Format Standard with Common Base Event integrated with FTM
- Create and manage enterprise change control requests, work orders, problem tickets, work requests on Pac2000, and track it to successful completion
- Efficiently used Confluence to create and share information, JIRA to track and deliver projects, Anthill Pro for deployments and later migrated to Jenkins with JFrog
- Handled complex code with development and enhancements with tight SLAs
- Lead a long running tech refresh project to migrate dated IBM middleware softwares, DB and servers to current software iterations of FTM, IBM App Connect, and zOS DB
- Orchestrated event-driven workflows bridging REST APIs and Kafka, consuming REST events, publishing to Kafka topics, triggering SOAP-based legacy systems. Also migrating SOAP Web services to use cloud based Restful API over JSON.

Key contributions:

Designed and built an AI-powered Enterprise Integration Agent to automate operational tasks across IBM MQ and ACE middleware environments — reducing manual intervention, accelerating root cause diagnosis, and improving engineer productivity across integration workflows.

- Built an AI agent using the Anthropic API to autonomously diagnose IBM MQ failures, identify root causes from transaction logs, and recommend or apply corrective fixes with minimal human input.
- Implemented real-time transaction status lookup and cross-environment comparison across two database instances, enabling engineers to instantly reconcile discrepancies between environments.
- Developed an automated file management module to handle copying test files to target servers, renaming files, and preparing WMQH files — eliminating repetitive manual steps in regression and module testing.
- Integrated an alert and reporting engine that surfaces actionable insights from queue and flow health checks, improving incident response time and operational visibility.
- Built a suite of developer utility features including ASCII conversion tools and optimized query execution, increasing day-to-day engineering efficiency.
- Designed the agent with an extensible tool architecture, enabling new capabilities to be added incrementally without disrupting existing workflows.

Technology Stack: Python, Flask, Copilot, AI Agent architecture, PostgreSQL/DB2, REST APIs, Shell scripting, IBM App Connect Enterprise 12.0, FTM 3.0/3.2, Java 8, JDK 1.8, XML, DFDL, IIB10.0.0.x, WMQ 9.0, EQSL, WAS 8.5, DB2, IBM Data Studio 4.1.1, IBM RSA 9.1, SVN, JIRA, Confluence, KAFKA, JSON, AntHill Pro, Jenkins, JFrog, AppDynamics, Git Hub, Splunk, pymqi, ibm_db

Client: Arcelor Mittal, East Chicago

Jan 2018 – Nov 2019

Title Held: IBM Middleware Consultant

Employer: OpenLogix Corp

Project/s: Enhancements, Migration

Responsibilities:

- Migration of Services from WMB 8 to IIB10, which involved extensive SAP integration along with SQL Server, Files and MQ based messaging interfaces
- SAP integration involving IDOC and BAPI, with SQL Server to various SAP business services like SAP ECC, SCM, TM, PI
- Administration and Maintenance of MQ and IIB infrastructure, on both AIX and Windows Operating systems
- Worked extensively on Web Service Development involving XML, XSLT, SOAP, XML Schemas and WSDL
- Actively worked on database designs writing complex queries with DB2
- Worked independently to migrate CVS to Microsoft Azure and implemented partial CICD using Jenkins, JFrog and Ant

Technology Stack: IIB10, MQ 9.x, SQL Server, SAP IDOC, BAPI, CVS, Ant, Axway Secure Transport, Biz Talk, Azure

Client: CVS Pharmacy, Chicago West suburbs

March 2017 – Nov 2017

Title Held: Integration Technical Lead

Employer: OpenLogix Corp

Project/s: Enhancements, Migration, New BSR

Responsibilities:

- As a member of Enterprise Service Delivery, I was involved new services development for ESL (Enterprise Service Layer), Enhancements of existing services, Migration from legacy systems to new Service layer and various support, management and monitoring activities
- Worked on architecture which used Java Client, RAD, APIC, Datapower, Tivoli IT CAM, WSRR, MQ, IIB and legacy systems.
- As Technical lead I delivered two major projects to completion in timely fashion with high customer satisfaction and appreciation from Project team and ESD team.
- Briefly worked on IBM APIC connect to create Products and publish, also used analytics to debug and other statistics.
- The service integration has transformation of Java Objects to JSON and, JSON to SOAP Message using APIC and Datapower, SOAP to XML using Datapower, and XML to COBOL using IIB, with broadcasting, publish subscribe, aggregation, synchronous and asynchronous message transportation
- As part of FIPS 140 series compliance i worked on enabling secure connections from IIB to DB2 Database hosted on mainframe and AIX servers using JDBC Type 4 and ODBC drivers with TLS 1.2
- Worked excessively on migrating WMB 6 message flows to IIB 9 with use of DFDL for various backends like RxClaim, Recap, QL (Quantum Leap) and Tandem.
- Followed linear-sequential life cycle model helping documentation, stability without ambiguous requirements and projects with short timelines but expertise resources.
- Worked on critical services involving major Clientele like Peoplesafe, Vordel, COS, CAS, Portal, IVR and others. With domains involving Enterprise, Specialty, Digital and Pharmacy Benefit Management
- Worked extensively on Retry mechanism with custom requirements, logging framework with custom levels using log4j, enhancements involving manual aggregation to make backend calls sequential.
- Worked on infrastructure project where in new server/brokers were added to Production environment in preparation to high traffic welcome season.
- Managed and supported deployments, regression and test support for Client Test Environment involving Datapower, IIB, Message Broker along with WSRR.
- Effectively managed multiple PMRs with IBM for different issue and support with IIB and APIC.
- Efficient interaction with offshore team to train, guide and work along to achieve tight timelines.

Technology Stack: JSON, XML, DFDL, IIB9.0.0.4, APIC WMQ 8.0, EQSL, Datapower XI52, Serena, Splunk, XML Spy, Tortoise SVN, SOAP UI, Putty, Beyond Compare, RAD, Node JS, SQL Developer, HP QC, F5 Load Balancer

Client: WELLS FARGO BANK, N A, Charlotte, NC

Jan 2016 – March 2017

Title Held: Apps System Engineer

Employer: OpenLogix Corp

Project/s: Global MTS Program, FTM 2.1 to FTM 3.1 Migration, ACH Int'l

Responsibilities:

- As a member of Global Payment Broker team I was involved in various integration projects involving, new development, maintenance of current environment and migration for FTM 2.1 to FTM 3.0
- Used ESQL, DFDL extensively to parse different message formats like SEPA, JSON, NACHA, OFAC, IFML, ISF, GUS and various others
- Provide support for existing ACH Int'l Module in logical testing, fixing defect and enhancements
- Install and setup the complete FTM 2.1 and FTM 3.0 architecture framework in local system for development and testing purpose
- Developed various interfaces in FTM3.0 and enhancements in FTM2.1 involving efficient ESQL coding and utilizing FTM
- Effectively used Web Services Distributed Management Event Format Standard with Common Base Event integrated with FTM
- Prepared and implemented migration procedures for WMB7/FTM2.1 interfaces to IIB 9/FTM 3
- Create and manage enterprise change control requests, work requests on Pac2000, and track it to successful completion
- Efficiently used Confluence to create and share information, JIRA to track and deliver projects, FishEye for source code and Crucible for code reviews along with Anthill Pro
- Documented current environment and created mapping documents for existing applications
- Handled complex code with development and enhancements with tight SLAs

Technology Stack: FTM 3.0/2.1, Java 8, JDK 1.8, XML, DFDL, IIB9.0.0.4, WMQ 8.0, ESQL, WMB 7, WAS 8.5, DB2, IBM Data Studio 4.1.1, IBM RSA 9.1, SVN, JIRA, Confluence, FishEye, Crucible, Anthill Pro

Client: KROGER TECHNOLOGY, Blue Ash, Ohio, USA

Sep 2015 - Jan 2016

Title Held: Integration Services Consultant

Employer: OpenLogix Corp

Project/s: TlogParser/Customization of POSLog to Kroger specific

Responsibilities:

- As a member of Integration services team I was involved in writing services that can be integrated and used with platform independent technologies also including IIB 10 message flows
- Used Java extensively to create a parser that can parse ACE Tlog and transform into POSLog using XSLT
- Investigating alternate configurations & implementing better solutions
- Help solve problems with EDI inbound and outbound flows in XB62
- Extensively used XML handling Java APIs JAXP, JAXB, and DFDL archives
- Created XSL stylesheets to transform TLog xml to POSLog xml
- Used XPATH in transformation to POSLog
- Used Confluence and JIRA and GIT with FishEye

Technology Stack: Java 8, JDK 1.8, JAXB, JAXP, XML, XSL, DFDL, IIB9.0.0.2, IIB10.0.0.2, WMQ 7.0, ESQL, GIT, Datapower XB60/62, ACE Tlog, JIRA, Confluence

Client: DELHAIZE AMERICA LLC Salisbury, North Carolina, USA

Sep 2011 – Aug 2015

IBM Middleware Consultant/Application Analyst

Employer: OpenLogix Corp

Project/s: PULSE, WMStoOSI, Logile Live Labor, Info Gen Platform, Exception Based Routing, Network / Environment Separation, Application Migration (NES)

Responsibilities:

- Participated in Business Integration efforts and as a member of shared services data integration team I was involved in all phases of the project life cycle from scoping and planning, requirements gathering, design, development and testing
- Created Design Documents for Functional and Non-Functional requirements, Build and Deployment docs, Release Notes and Support documents
- Involved in customer facing role which involved Technical design review, Code reviews with Senior Solution architects
- Used IBM support packs (IA9C & IA9V) for development of Non-Functional interfaces
- Designed and developed Publish/Subscribe interfaces to achieve message distribution
- Designed and developed reusable components such as Error/Audit/Logger interfaces with IBM Common Base Events schema
- Used ESQL extensively and achieved mapping with beneficial functions like Propagate, Absval, Case, Last-move, Fieldvalue, Cardinality etc.
- Developed various KPI components to provide management and technical staff with insight of middleware processing components health
- Worked extensively on XMLNSC parsers and COBOL Copy book formats
- Did Unit Testing, Created Unit Test Case documents, involved in regression and integration testing
- SME on Websphere Data Interchange application as part of EDI.
- Identify systems, connections, and access that needed to be updated due to security migration
- Document meeting notes, outcomes, action items, etc.
- Identify segmentation conflicts with design and research solutions
- Revise application architecture based on meeting results
- Regularly interact with senior technology and business management and or also explain complex technical matters to both technical and non-technical staff
- Manage and support application non production Environments and co-ordinate with Developers/QA/Testing/Business users & Infrastructure teams for Incidents
- Participate in the pre-deployment analysis of systems and software in order to plan activities and meet deadline
- Prepared migration steps and procedures for version 7 application interfaces to IIB 8.x/9.x along with proper test cases
- Support deployment of new application code/releases on Test and production environments
- Manage application environment crisis, Track, resolve and implement pro-active measures to any potential issues & document all application infrastructure issues
- Providing continuous suggestions for various improvements with regard to performance, capacity sizing, better utilization of the hardware/software available resources
- Review, develop and execute implementation plans (eg., Smoke Testing, Pre Production Requisite for Production Go-live) for all production changes.

Technology Stack: WBIMB 8/7.0.0.3, Websphere Data Interchange (WDI), WMQ 7.0, ClearCase, ESQL, RfhUtil, Eclipse Tool Kit, XML Spy, XML schema, Copybooks, DB2, AIX, Windows & Mainframe z/OS, Wintel, MQMON, RfhUtil, DB2 and AIX

Client: WAL-MART STORES, INC., Bentonville, USA

April 2010 - Sep 2011

Titles Held: Systems Analyst - Bentonville, USA, Sr. Middleware Developer – India, Associate – India

Employer: Cognizant Technology Solutions

Project/s: PROFIT, Finance AVM, FIN-INTG PROJECT (Finance Integration Project), Pickup Today (PuT)

Responsibilities:

- Work independently, manage multiple assignments, coordinate onsite-offshore teams, and mentor junior members.
- Extensively used Java Compute nodes to develop a Java-based middleware solution in Message Broker.
- Created deployment policies (SOMA interfaces) to deploy DataPower objects to higher environments.
- Configured DataPower XI52 4.0.2.0 components including WebService Proxy, HTTP Front Side Handler, XML Firewall, and Proxy Rules.
- Provided daily production support, investigated error messages, resolved client queries, and maintained SLAs.
- Led customer-facing technical design and code reviews with senior solution architects.
- Collaborated with testing teams to resolve pre-deployment issues.
- Managed critical issues and WAR rooms, coordinated tasks and action items across teams.
- Delivered continuous status updates, monitored system performance, and recommended improvements and enhancements.
- Developed utilities for application health checks, payload analysis, throughput monitoring, and key analytics.
- Performed Technical Unit Testing (TUT) for Brazil and Chile message broker interfaces, common services, and router flows.
- Used HP Quality Center to create and track test cases, test sets, and defects, coordinating with multiple teams.
- Participated in daily status and handshake calls with onsite teams to understand progress and plan work.
- Prepared daily status reports covering overall status, queries, and follow-ups.
- Conducted requirement analysis and authored service specification and technical design documents.
- Worked with WBIMB, MQ, and Java across three modules.
- Developed interfaces using advanced features such as File node, Java Compute node, and MQGet node.
- Created auto-deployment scripts for administrators and developers to implement interfaces.
- Used timer nodes to trigger message flows for batch transaction processing.
- Implemented WS Security, WS Addressing, encryption/decryption, digital signatures, certificate generation, and SSL.
- Analyzed, designed, and developed interfaces using DataPower Appliances XB60 and XI52.
- Successfully configured DataPower components including WS Proxy, XML Firewall, Multiprotocol Gateway (MPGW), and Web Firewall.
- Led go-live activities in coordination with administrators, including setting up Message Broker environment and MQ infrastructure.

Technology Stack: WBIMB 6.1, WMQ 6.0/7.0, EQSL, Datapower, RfhUtil, Eclipse Tool Kit, XML Spy, WSDL, XML schema, SOAP, SOAP UI, Copybooks, Oracle, DB2, AIX, AS/400 and Windows

Client: WAL-MART STORES, INC., Bentonville, USA

April 2008 - April 2010

Titles Held: Technical Lead/Senior Software Engineer – India, Software Engineer – India

Employer: Wipro Technologies

Project/s: MTEP GM Integration - Canada, Multi-Tenant E-Commerce Platform (MTEP) - ASDA

Responsibilities:

- Served as Technical Lead for the end-to-end integration of an E-commerce platform with legacy systems using the IBM WebSphere Business Integration (WBI) suite, including WebSphere Message Broker and WebSphere MQ, along with Java-based web services.
- Conducted requirements analysis and authored Service Specification Documents and Technical Design Documents.
- Led performance tuning and analytics enhancements of the system, incorporating new features as per evolving business requirements.
- Designed and developed comprehensive tracing and logging mechanisms to facilitate issue diagnosis and resolution.
- Contributed to multiple modules utilizing technologies such as Java, IBM WebSphere MQ, and WebSphere Message Broker (WBIMB).
- Coordinated with the onsite team through regular handshake calls and status updates to ensure seamless project execution.
- Actively participated in large-scale business integration initiatives, contributing across all phases of the project lifecycle, including scoping, planning, requirements gathering, design, development, testing, and go-live.
- Played a key role in the Content, Payment, and Fulfillment modules; later designated as Single Point of Contact (SPOC) for two of these modules.
- Responsible for the analysis, design, and implementation of the Content, Payment, and Fulfillment modules using Java, IBM MQ, and WebSphere Message Broker.
- Designed and developed a robust Error Handling Framework (Error Sub Flow) using Log4j.
- Developed the Card Authorization web service, which integrates with the third-party EPAY system for real-time credit card authorization.
- Implemented web service flows in WebSphere Message Broker with WS-Security enabled at the flow level.
- Created JUnit test cases and performed unit testing across Development, Integration Testing (IT), and Quality Assurance (QA) environments.
- Prepared Unit Test Cases (UTC) and Unit Test Plans (UTP) for all development activities.
- Independently designed and implemented logging and alerting mechanisms using Log4j across WebSphere Message Broker, Java, and web services.
- Effectively led interactions with the MQ team and conducted client-facing meetings, presentations, and reviews.
- Authored key project documentation, including Code Review documents, Design Review documents, Build & Deployment guides, Release Notes, and Support documents.
- Managed project artifacts in CVS and maintained code using ClearCase.
- Handled application deployments using POWER and managed migrations across multiple environments.
- Utilized Remedy and HP Quality Center for incident and defect management.
- Independently managed Change Requests and provided application support during the post-implementation support phase.
- Participated in daily status meetings and coordination calls with the onsite team.

Technology Stack: IBM WBMB 6.1/MQ 6.0, J2EE, IBM's integration software platform, JDBC 2.0, Cookies, WebSphere Application Server 6.1, RSA 7.0, Informix, DB2, Teradata, Oracle

Employer: Bharat Glass and Crockeries Pvt Ltd, Bangalore

Mar 2007 - Oct 2007

Associate - India

Project: Inventory Management System V3

Responsibilities:

- Studied legacy architecture thoroughly and created Flow Charts, UML diagrams and architecture document for the whole architecture
- Created Blue Print document for the new version application, with all business, technical and development artifacts
- Involved in direct discussions with Sales and Marketing Dept to understand requirement
- Created Functional and Technical Design documents, build and deployment document and production support documents
- Developed MIS Reporting Module, bar-coding module which exchange messages between front end web systems to backend systems (database, audit systems, billing)
- Created Unit test cases and did unit testing, created Unit test plan
- Created Support documents and provided End-User support

Technology Stack: IBM WBMB 6.0/MQ, J2EE, JDBC 2.0, XML, SAOP, My-SQL 5.0, AIX/Unix, Linux, Apache Subversion

Client: Danish Food Products Pvt Ltd, Mumbai

Feb 2006 - Dec 2006

Software Engineer – India

Employer: Instance Software Solutions

Project: Product Management

Responsibilities:

- Involved in analysis, design and implementation of different modules
- Design of mid-tier interfaces, ESQL programming, and development of a JMS framework to interface between the web front end and MQ Series
- Design and develop message flows for interfacing between the web front-end and the mainframe back-end
- Design and modeling of message sets involving XML-CWF mapping and vice versa

Technology Stack: IBM WBMB 6.0/MQ, Java, JDBC 2.0, WebSphere Application Server 6.0, DB2, Oracle 9i, CVS, Windows XP/ AIX

Client: Auro Avenida Exports Pvt Ltd, Hyderabad, India

Aug 2005 - Jan 2006

Software Engineer – India

Employer: Instance Software Solutions

Project: Generator Cost System

Responsibilities:

- Involved in Requirement Analysis, Design Documents and weekly Review Meetings
- Designing and creating the Database tables using ER-Diagrams
- Developed the user interfaces using HTML 4.0 and JSP 1.1, Servlets on the server side to accept the data from multiple HTTP clients, and interact with the back-end My SQL to generate output for the users
- Developed Server side components using servlet
- Developing Test Cases and subsequently unit testing of the various modules developed

Technology Stack: Java/J2EE, JSP, HTML, JDBC 2.0, Servlet, J2EE Application Server, Eclipse 3.01, SQL Server 2003
